```

## Define Graphing Function

In this section, we define the function `make_graph`. You don't have to know how the function works, you should only care about the inputs. It takes a dataframe with stock data (dataframe must contain Date and Close columns), a dataframe with revenue data (dataframe must contain Date and Revenue columns), and the name of the stock.

```
[7]: def make_graph(stock_data, revenue_data, stock):
    fig = make_subplots(rows=2, cols=1, shared_xaxes=True, subplot_titles=("Historical Share Price", "Historical Revenue"), vertical_spacing=.3)
    stock_data_specific = stock_data[stock_data.Date <= '2021-06-30']
```

```
[7]: def make_graph(stock_data, revenue_data, stock):
fig = make_subplots(rows=2, cols=1, shared_xaxes=True, subplot_titles=("Historical Share Price", "Historical Revenue"), vertical_spacing = .3)
stock_data_specific = stock_data[stock_data.Date <= '2021-06-14']
revenue_data_specific = revenue_data[revenue_data.Date <= '2021-04-30']
fig.add_trace(go.Scatter(x=pd.to_datetime(stock_data_specific.Date, infer_datetime_format=True), y=stock_data_specific.Close.astype("float"), name="Stock Price"))
fig.add_trace(go.Scatter(x=pd.to_datetime(revenue_data_specific.Date, infer_datetime_format=True), y=revenue_data_specific.Revenue.astype("float"), name="Revenue"))
fig.update_xaxes(title_text="Date", row=1, col=1)
fig.update_xaxes(title_text="Date", row=2, col=1)
fig.update_yaxes(title_text="Price ($US)", row=1, col=1)
fig.update_yaxes(title_text="Revenue ($US Millions)", row=2, col=1)
fig.update_layout(showlegend=False,
height=900,
title=stock,
xaxis_rangeslider_visible=True)
fig.show()
```

### Question 1: Use yfinance to Extract Stock Data

Using the `Ticker` function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is Tesla and its ticker symbol is `TSLA`.

```
[15]: Tesla = yf.Ticker("TSLA")
```

Using the ticker object and the function `history` extract stock information and save it in a dataframe named `tesla_data`. Set the `period` parameter to `max` so we get information for the maximum amount of time.

```
[17]: Tesla_data = ("TSLA")
Tesla = yf.Ticker("TSLA")
```

The screenshot shows a Jupyter Notebook interface. The top bar indicates the file is 'Final Assignment.ipynb'. The notebook contains two code cells. The first cell, labeled [17], fetches Tesla stock data using the yfinance library. The second cell, labeled [18], resets the index of the 'tesla\_data' DataFrame and displays the first five rows using the 'head()' method. Below the code, the output of the 'head()' method is shown as a table with columns: Date, Open, High, Low, Close, Volume, Dividends, and Stock Splits. The table contains five rows of data from 2010-06-29 to 2010-07-06.

```
[17]: tesla_data = ("TSLA")
tesla = yf.Ticker("TSLA")
tesla_data = tesla.history(period="max")
```

**Reset the index** using the `reset_index(inplace=True)` function on the `tesla_data` DataFrame and display the first five rows of the `tesla_data` dataframe using the `head` function. Take a screenshot of the results and code from the beginning of Question 1 to the results below.

```
[18]: tesla_data.reset_index(inplace=True)
tesla_data.head(5)
```

	Date	Open	High	Low	Close	Volume	Dividends	Stock Splits
0	2010-06-29	1.266667	1.666667	1.169333	1.592667	281494500	0	0.0
1	2010-06-30	1.719333	2.028000	1.553333	1.588667	257806500	0	0.0
2	2010-07-01	1.666667	1.728000	1.351333	1.464000	123282000	0	0.0
3	2010-07-02	1.533333	1.540000	1.247333	1.280000	77097000	0	0.0
4	2010-07-06	1.333333	1.333333	1.055333	1.074000	103003500	0	0.0

### Question 2: Use Webscraping to Extract Tesla Revenue Data

Use the `requests` library to download the webpage <https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/revenue.htm>. Save the text of the response as a variable named `html_data`.

`storage.apptdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/revenue.htm` Save the text of the response as a variable named `html_data`.

```
[27]: url = "https://cf-courses-data.s3.us.cloud-object-storage.apptdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/revenue.htm"
      html_data = requests.get(url).text
```

Parse the html data using `beautiful_soup`.

```
[33]: soup = BeautifulSoup(html_data, 'html.parser')
```

Using `BeautifulSoup` or the `read_html` function extract the table with `Tesla Quarterly Revenue` and store it into a dataframe named `tesla_revenue`. The dataframe should have columns `Date` and `Revenue`.

► Click here if you need help locating the table

```
[34]: pd.read_html('https://www.macrotrends.net/stocks/charts/TSLA/tesla/revenue')[1]
```

```
[34]:
```

	Tesla Quarterly Revenue(Millions of US \$)	Tesla Quarterly Revenue(Millions of US \$).1
0	2023-03-31	\$23,329
1	2022-12-31	\$24,318
2	2022-09-30	\$21,454
3	2022-06-30	\$16,934
4	2022-03-31	\$18,756
5	2021-12-31	\$13,762
6	2021-09-30	\$11,200
7	2021-06-30	\$10,129
8	2021-03-31	\$9,753
9	2020-12-31	\$5,243
10	2020-09-30	\$4,916
11	2020-06-30	\$4,817
12	2020-03-31	\$4,916
13	2019-12-31	\$4,916
14	2019-09-30	\$4,916
15	2019-06-30	\$4,916

18	2018-09-30	\$4,916
19	2018-06-30	\$4,916
20	2018-03-31	\$4,916
21	2017-12-31	\$4,916
22	2017-09-30	\$4,916
23	2017-06-30	\$4,916
24	2017-03-31	\$4,916
25	2016-12-31	\$4,916
26	2016-09-30	\$4,916
27	2016-06-30	\$4,916
28	2016-03-31	\$4,916
29	2015-12-31	\$4,916
30	2015-09-30	\$4,916
31	2015-06-30	\$4,916
32	2015-03-31	\$4,916
33	2014-12-31	\$4,916
34	2014-09-30	\$4,916
35	2014-06-30	\$4,916
36	2014-03-31	\$4,916
37	2013-12-31	\$4,916
38	2013-09-30	\$4,916
39	2013-06-30	\$4,916
40	2013-03-31	\$4,916
41	2012-12-31	\$4,916
42	2012-09-30	\$4,916
43	2012-06-30	\$4,916
44	2012-03-31	\$4,916
45	2011-12-31	\$4,916
46	2011-09-30	\$4,916
47	2011-06-30	\$4,916
48	2011-03-31	\$4,916
49	2010-12-31	\$4,916
50	2010-09-30	\$4,916
51	2010-06-30	\$4,916
52	2010-03-31	\$21
53	2009-12-31	NaN
54	2009-09-30	\$46
55	2009-06-30	\$27

Execute the following line to remove the comma and dollar sign from the `Revenue` column.

```
[61]: tesla_revenue['Revenue'] = tesla_revenue['Revenue'].replace({'\$', ',', ''}, '', regex=True)
```

Execute the following lines to remove an null or empty strings in the Revenue column.

```
[65]: tesla_revenue=tesla_revenue[tesla_revenue['Revenue'].notnull() & tesla_revenue['Revenue'].str.strip() != '']
```

Display the last 5 row of the `tesla_revenue` dataframe using the `tail` function. Take a screenshot of the results.

```
[87]: tesla_revenue.tail()
```

```
[87]:
```

Date	Revenue
------	---------

### Question 3: Use yfinance to Extract Stock Data

Using the `Ticker` function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is GameStop and its
